Boise State University
Foundational Studies Program Course Application Form
Due to the Foundational Studies Program by August 19, 2011

After the Foundational Studies Program has approved a course, departments will continue through the regular department and college procedures. The approved course should be submitted to the University Curriculum Committee by October 1, 2011.

Table of Contents (Click title to go to that section)

Instructions: .........................................................................................................................................................1
Part I. Course Information .......................................................................................................................................1
Part II. Syllabus Statement .........................................................................................................................................2
Part III. Design for Accessibility ..............................................................................................................................2
Part IV. Evidence of Quality Course Design ...........................................................................................................3
Course Design Table ................................................................................................................................................4

Instructions:

1. Complete one form per course.
2. Attach this Foundational Studies Course Application Form to the back of the University Curriculum Committee “Request for Curriculum Action” form. Both forms should be submitted to the Foundational Studies Program Office by August 19, 2011.

Part I. Course Information

Part II. Syllabus Statement

Boise State’s Foundational Studies Program provides undergraduates with a broad-based education that spans the entire university experience. GEOS 100 satisfies 4 credits of the Foundational Studies Program’s Disciplinary Lens – Natural, Physical and Applied Science requirements. It supports the following University Learning Outcomes, along with a variety of other course-specific goals.

ULO 8. Apply knowledge and methods characteristic of scientific inquiry to think critically about and solve theoretical and practical problems about physical structures and processes.

GEOS 100: Fundamentals of Geology is designed help students understand the processes shaping the physical world around them, through the perspective of geologist. This course helps to achieve the goals of the Foundational Studies Program by focusing on the following course learning outcomes.

After successful completion of this course, you will be able to:

- Develop and articulate a question based on relevant geologic observations, 2) describe parallel, testable hypotheses that explain your observations, 3) design a simple experiment to test each hypothesis, and 4) evaluate the results of the experiment to decide which hypotheses are supported by the data.
- Clearly differentiate between observation and interpretation of geologic data, and summarize and relate observations in order to support an interpretation.
- Clearly and accurately apply scientific terms and principles to construct organized and concise written, oral, and graphical communication about important ideas such as plate tectonic theory, the rock cycle and classification of Earth materials, geologic time, mountain building and geologic structures, and surficial processes.
- Describe the primary ways in which humans depend on Earth materials and are affected by geologic processes, and explain how scientific understanding about these processes has a direct impact on societal wellbeing.

Part III. Design for Accessibility

In the space below, briefly describe plans for providing access to course materials and activities (or equivalent alternatives) to all students in adherence with the Americans with Disabilities Act. Although these plans may vary from instructor to instructor, the descriptions provided below should be representative of intended departmental and instructor practices. (See example statements appended to this form.)

GEOS 100: Fundamentals of Geology: Online sections will include narrated lectures combining PowerPoint presentations with the instructor’s voice. Instructors will be encouraged to provide PowerPoint files with a textual transcript of the lecture in the notes section of each slide. Images used in the Blackboard site will have appropriate textual descriptions that can be read by screen reader software. In all sections, students will be able to submit assignments in a variety of formats, including written papers and podcasts. Extra time on tests and other accommodations will be provided to students as needed per the policies of the Disability Resource Center.
Part IV. Evidence of Quality Course Design

Please use the table below (column headings for this table should not be changed) to provide evidence that the course has been carefully designed and is clearly aligned with Foundational Studies Program desired ULOs. All sections of the course should share similar student learning outcomes. Teaching and Learning Activities and Assessment Methods may vary from instructor to instructor. Please use the table to report representative strategies that may be used. Assessment activities used for reporting to the Foundational Studies Program should be consistent across different sections of the course.

Please see below.

## Course Design Table

<table>
<thead>
<tr>
<th>Foundation ULO 8 Criteria</th>
<th>Foundation ULO 8 Notions of Exemplary Work</th>
<th>Course Learning Outcomes: By the end of this course, each student should be able to...</th>
<th>Assessment Method: Evidence of Student Learning</th>
<th>Planned Teaching &amp; Learning Activities / Pedagogy</th>
</tr>
</thead>
</table>
| ULO 8.1: Process of Inquiry and Analysis in Response to Evidence or Observation | * Skillfully and thoroughly formulates a research question or testable hypothesis.  
* Constructs a model to test evidence and observations  
* Skillfully uses model to either confirm existing explanations or formulate new hypotheses | * Develop and articulate a question based on relevant geological observation  
* Describe parallel, testable hypotheses that explain their observations  
* Design a simple experiment to test each hypothesis  
* Evaluate the results of the experiment to decide which hypotheses are supported by the data | Summative assessment of learning outcome based on:  
* Short-answer exams delivered in laboratory (scores from selected sections of grading rubrics reported to Foundations Program)  
* Multiple-choice exams delivered via Blackboard (selected mid- and higher-order thinking skill questions reported to Foundations Program) | Learning outcome supported by:  
* Hands-on laboratory activities  
* Lecture, think-pair-share activities, and in-class demonstrations using the scientific method  
* Formative assessment and metacognition opportunities through post-lab quizzes and short in-class quizzes |

</table>
| ULO 8.3: Communication of Scientific and/or Technological Understandings | * Produces clear, accurate, well-organized written and oral communications about scientific and technological understandings  
* Use of scientific language, representational tools, and notation covered in the course is skillful. | Clearly and accurately apply scientific terms and principles to construct organized and concise written, oral, and graphical communication about important ideas such as plate tectonic theory, the rock cycle and classification of Earth materials, geologic time, mountain building and geologic structures, and surficial processes. | Summative assessment of learning outcome based on:  
* Written and graphical representation of results from laboratory exercises (scores from selected sections of grading rubrics reported to Foundations Program)  
* Oral presentation on the origin and impacts of a major energy resource available to society (scores from selected sections of grading rubric reported to Foundations Program)  
* Multiple-choice exams delivered via Blackboard (selected questions reported to Foundations Program) | Learning outcome supported by:  
* Hands-on laboratory activities  
* Lecture, think-pair-share activities, and in-class demonstrations using the scientific method  
* Formative assessment and metacognition opportunities through post-lab quizzes, short in-class quizzes, and knowledge surveys at beginning of course and prior to each exam |
